event.

Include notes on objects/agents involved with the injury (eg spar, chainsaw, chemical, vehicle) and mechanism of injury (eg slip, struck by)

Timberlands Limited HS211 Incident Report Form v9 UNDERLYING/BASIC OR ROOT CAUSES: Inadequacies in the occupational safety and health (OSH) management system that allow the immediate causes to arise unchecked, leading to the accidents.

These may include: poor maintenance, inadequate training or instruction, poor supervision, inadequate selection and placement of employees, incomplete risk assessments, unsatisfactory systems of work, and even poor accident investigations which only highlight one or two immediate causes.

These underlying causes can be grouped loosely into three interrelated categories:

• (lack of) management control factors

- personal or job factors
- environmental factors.
